COMPLETEVIEW IOS

With Salient's CompleteView™ app, you can easily and instantly access live video, playback and export recorded video, and control cameras with PTZ functions from your phone.

EASY AND EFFICIENT

The CompleteView app allows you to securely stream audio and video from any analog or IP cameras, encoders, and NVRs connected to your CompleteView Recording Server.

The app supports hardware accelerated H.264 decoding so you can stream video to your phone, which improves battery life and bandwidth consumption. Salient's Dynamic Resolution Scaling further ensures that bandwidth between your phone and the Recording Server is optimized to get you the best possible image quality regardless of your connection.

For a scalable and seamless transition from your desktop or browser, you can access Views and Maps configured in your CompleteView Management Server, including the ability to view video streams directly from image and satellite maps.
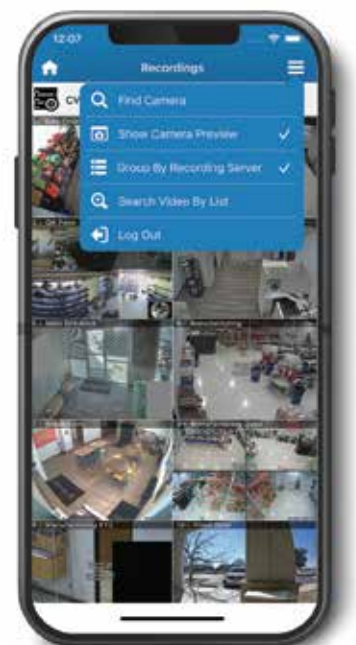

FULL CONTROL

The CompleteView app gives you the power to see video the way you want with built-in controls to adjust frame rate and video quality levels on each video stream.

The app also has powerful PTZ camera controls. You can stretch, pinch, and drag to manipulate PTZ cameras. The app allows you to access, set, and name PTZ presets and control PTZ speed.

When playing back previously recorded video, the app has various scrub bar controls and adjustable playback speeds so you can quickly seek to exactly what you want to view.

Something catch your eye? The CompleteView app allows you to take snapshots and email them off in addition to supporting clip exports.

THE DETAILS YOU NEED

The CompleteView app has robust search capabilities to help you find what you need. Quickly search for any system component such as a View, Map, Camera, or Server with built-in search.

When browsing through recorded video, you can use both list-based and date/time-based search to quickly narrow down to the video segment you are interested in. Lastly, the app supports overlays, quick review, and timeline review to further ensure that you have all the details you need at your fingertips.

FEATURES

- **Live and recorded audio and video from any analog or IP cameras, encoders, and NVRs**
- **Secured with HTTPS and WSS**
- **Hardware accelerated H.264 decoding for better battery life and bandwidth**
- **Optimized bandwidth use and experience with Dynamic Resolution Scaling**
- **Powerful PTZ camera controls, including support for presets and speed control**
- **Enhanced search capabilities for system components - views, maps, cameras, servers.**
- **Take and email Snapshots**
- **Export video onto your mobile device**
- **Date and time based search for recordings**
- **Access centrally configured Views and Maps**
- **View camera streams from satellite maps and floor plans**

SYSTEM REQUIREMENTS

The CompleteView app requires devices running iOS 13.0 or higher. You will need CompleteView Management and Recording servers that you can connect to in order to fully use the features of this app. The app works with CompleteView ONE, Pro, and Enterprise editions, version 5.5.0 or higher. If you have an older version of these backend components, use the Legacy TouchView app

Available on the App Store
