
THE SALIENT SUMMARY

DYNAMIC RESOLUTION SCALING

Intelligent technology that minimizes bandwidth consumption when streaming video with CompleteView 20/20. Dynamic Resolution Scaling streams just the video necessary for display without affecting the recorded video. Video streamed for live display and playback is scaled before being transmitted to the client providing full display quality and full resolution recorded video.

UNIFIED PLATFORM

Management Server centrally stores all business, user, and system data sharable among all components of CompleteView 20/20. All Recording Servers are administered, monitored, and updated from the Management Server. Camera licenses are not tied to the camera's MAC address, giving the administrator the ability to allocate camera licenses on the same Recording Server as needed. CompleteView 20/20 supports Roaming User accounts where all users are able to log into any workstation running the Desktop Client.

FULLY OPEN ARCHITECTURE

CompleteView 20/20's open architecture enables your organization to seamlessly leverage existing technology investments and minimize disruption as hardware and software infrastructure changes over time.

VIDEO WALL

Video Wall allows users to view and manage multiple monitor arrays. Simply drag views, maps, or cameras onto a video wall display tile to see updates in real-time. With video wall, users can create custom layouts spanning multiple servers and displays, as well as quickly identify the corresponding video monitors.

INTERACTIVE MAPPING TOOL

Satellite or image maps are linked to the selected live view and automatically switch when changing the view. The user can view live and recorded video directly from the map by simply clicking on a camera icon, which will show the viewing area and type of recording at the camera via a colorized cone. In the event of an incident, the Alarm View automatically displays the live video feed from the activated camera in one video tile, and the relevant map in its own tile along with side by side live view and playback. GeoView will show the cameras surrounding the incident. Easy to set up and available in all CompleteView 20/20 product versions.

SIMPLE PRICING MODEL

All features of CompleteView 20/20 are built into the camera license price, none of our features are an extra charge and there are no server fees or client fees. Our pricing is simply a one-time per camera charge.
