# ONVIF Configuration

CompleteView 20/20 conforms to the ONVIF media profile S standard, including configuration of video and audio streaming, PTZ, event handling, and device discovery. See the table below for supported features.

The use of ONVIF may be beneficial to those who have a camera they wish to use with CompleteView 20/20 that does not yet have a named driver within the system, but is ONVIF compatible. Given the option of using either a named driver or using the ONVIF driver shipped with CompleteView 20/20, the named driver is generally the preferable choice. In some instances however, using ONVIF may be preferable if the named driver does not support certain features, such as event handling. Before adding a camera to CompleteView 20/20 using ONVIF, verify that the camera is both ONVIF compatible and supports profile S by visiting <https://www.onvif.org/conformant-products/> and searching by profile, manufacturer, and model.

It is also worth noting that while many ONVIF compatible cameras come pre-configured with ONVIF media profiles which are required for use with CompleteView 20/20, some do not. Those cameras will have to be configured with profiles and other options before use. Specifically, an ONVIF user must be created on the camera, and it is recommended that the camera's ONVIF user password be the same as the camera's administrator password. Axis cameras currently do not come pre-configured with ONVIF profiles, so both an ONVIF user and profile must be manually created.

**Note:** Although ONVIF compatible, use only the named driver for the Axis M3058-PLVE panoramic camera at this time. The M3058 driver should also be used for other M305X panoramic Axis cameras, as well.

For multi-channel cameras, configurations may need to be created for each channel. Consult the manufacturers' documentation for specific information.

**ONVIF Profile S Feature Compatibility**

Feature	CompleteView Support
<b>General</b>	
System Settings	
User Authentication (WS-Username Token)	Y
User Authentication (Digest Authentication)	Y
User Handling	
Query Services and Capabilities	Y
Device Discovery	Y

M = Mandatory compliance with the feature, C = Conditional compliance with the feature. For more information, refer to: <a href="https://www.onvif.org/profiles/profile-s/">https://www.onvif.org/profiles/profile-s/</a>	

## ONVIF Profile S Specification Queries

This section specifies all the ONVIF profile S specific function calls/queries made by the Recording Server, categorized by the type of service.

### General

The following features are supported conforming to profile S but there are no specific queries for these features.

- WS-UsernameToken – Used to authenticate to a web service as described at: <https://www.oasis-open.org/committees/download.php/13392/wss-v1.1.1-spec-pr-UsernameTokenProfile-01.htm>
- Digest Authentication – HTTP digest authentication is used for all communication with the device (cameras)
- RTSP Streaming – UDP/TCP/HTTP
- Video – MJPEG, MPEG4, H.264
- Audio – G.7.11
- Device discovery – implemented using WS-Discovery mechanism via UDP broadcast over port 3702. More information can be found at: <http://docs.oasis-open.org/ws-dd/discovery/1.1/os/wsdd-discovery-1.1-spec-os.html>

### Device

- GetCapabilities
- GetServices
- GetDeviceInformation
- GetNetworkInterfaces
- GetNetworkProtocols

- GetRelayOutputs
- GetSystemDateAndTime

## Media

- GetProfiles
- GetProfile
- GetVideoSources
- GetVideoEncoderConfigurationOptions
- SetVideoEncoderConfiguration
- GetSnapshotUri
- GetStreamUri
- GetAudioSourceConfigurations
- GetCompatibleAudioSourceConfigurations
- AddAudioSourceConfiguration
- GetCompatibleAudioEncoderConfigurations
- AddAudioEncoderConfiguration
- GetAudioEncoderConfiguration
- AddPTZConfiguration

## Events

- CreatePullPointSubscription
- Subscribe
- Unsubscribe
- Renew
- GetEventProperties
- GetServiceCapabilities
- PullMessages

## PTZ

- GetConfigurations
- GetNodes
- GotoPreset
- SetPreset
- ContinuousMove
- Stop
- GetPresets

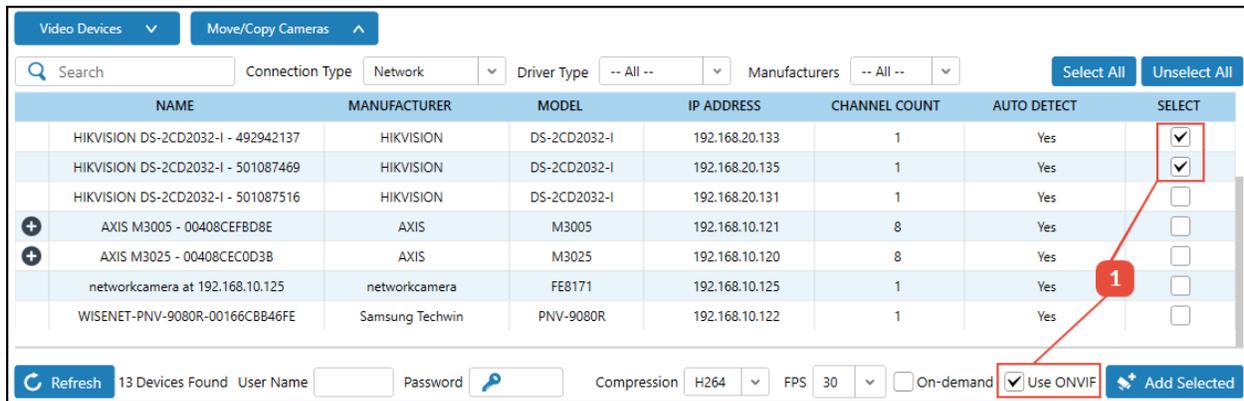

## Imaging

- Move (for focus)
- Stop (for focus)
- SetImagingSettings (for auto focus and auto iris)

**Note:** Iris open and close are not supported.

## Adding ONVIF Cameras

Adding an ONVIF camera follows the same basic steps as any named driver camera, detailed in [Recording Servers Cameras](#) in the main guide. To use ONVIF instead of using a named driver, check the Use ONVIF box during the Adding a Camera process. CompleteView 20/20 Recording Server utilizes WS Discovery protocol for ONVIF camera discovery, consequently, UDP port 3702 must be open in Windows Firewall for discovery and other functionality. The example below shows a multi-channel camera added using the ONVIF driver, checked below.

The screenshot displays the 'Video Devices' section of the software interface. At the top, there are tabs for 'Video Devices' and 'Move/Copy Cameras'. Below these are search and filter options: a search bar, 'Connection Type' set to 'Network', 'Driver Type' set to '-- All --', and 'Manufacturers' set to '-- All --'. There are 'Select All' and 'Unselect All' buttons. The main area is a table with the following columns: NAME, MANUFACTURER, MODEL, IP ADDRESS, CHANNEL COUNT, AUTO DETECT, and SELECT. The table lists several cameras, including three Hikvision DS-2CD2032-I cameras and two Axis M3005/M3025 cameras. The 'SELECT' column for the first two Hikvision cameras has checked checkboxes. At the bottom, there are controls for 'Refresh', '13 Devices Found', 'User Name', 'Password', 'Compression' set to 'H264', 'FPS' set to '30', 'On-demand' checkbox, 'Use ONVIF' checkbox (which is checked and highlighted with a red circle and the number '1'), and 'Add Selected' button.

NAME	MANUFACTURER	MODEL	IP ADDRESS	CHANNEL COUNT	AUTO DETECT	SELECT
HIKVISION DS-2CD2032-I - 492942137	HIKVISION	DS-2CD2032-I	192.168.20.133	1	Yes	<input checked="" type="checkbox"/>
HIKVISION DS-2CD2032-I - 501087469	HIKVISION	DS-2CD2032-I	192.168.20.135	1	Yes	<input checked="" type="checkbox"/>
HIKVISION DS-2CD2032-I - 501087516	HIKVISION	DS-2CD2032-I	192.168.20.131	1	Yes	<input type="checkbox"/>
+ AXIS M3005 - 00408CEFB8E	AXIS	M3005	192.168.10.121	8	Yes	<input type="checkbox"/>
+ AXIS M3025 - 00408CECOD3B	AXIS	M3025	192.168.10.120	8	Yes	<input type="checkbox"/>
networkcamera at 192.168.10.125	networkcamera	FE8171	192.168.10.125	1	Yes	<input type="checkbox"/>
WISENET-PNV-9080R-00166CBB46FE	Samsung Techwin	PNV-9080R	192.168.10.122	1	Yes	<input type="checkbox"/>

## ONVIF Configuration

Once added, the first media profile in the video device's supported profiles that matches the selected compression and channel ID will be selected by default. If the compression selected by the user is not supported by the profiles, the first profile in the list will be selected. If the selected profile supports audio, the audio options will be enabled, or else will be disabled.

The screenshot displays the ONVIF configuration interface for a camera. The top section shows a table with columns: ENABLE, ID, CAMERA NAME, TYPE, DEVICE, DRIVER, CHANNEL, USER NAME, PASSWORD, RESOLUTION, COMPRESSION, FPS, SCHEDULE, and STATUS. The first row is selected, showing details for 'AXIS M3027 - 00408CFFFD98 Camera 1'.

The 'MEDIA PROPERTIES' section is active, showing 'Video Properties' (Resolution, FPS, GOV Length, Bitrate Control, Bitrate, Quality) and 'Video Compression' (From Camera: H264, Stream As: MPEG4). The 'Audio Options' section is also visible, with 'Enable' checked and 'Source' set to 'Camera'.

The 'ONVIF SETTINGS' section contains a table of media profiles:

CHA...	MEDIA PROFILE	COMPRESSION	RESOLUTION	FPS	GOV	BITRATE (KB...	QUALITY	ENCODING PR...	SELECT
1	profile_0 h264	H264	2592x1944	12	32	2147483647	70	Main	<input checked="" type="checkbox"/>
1	profile_1 h264	H264	1920x720	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_2 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_3 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_4 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_5 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_6 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_7 h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_0 jpeg	MJPEG	2592x1944	12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_1 jpeg	MJPEG	1920x720	12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_2 jpeg	MJPEG	1920x1440	12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_3 jpeg	MJPEG	1920x1440	12	0	2147483647	70	Baseline	<input type="checkbox"/>

The 'Refresh' and 'Save Profile' buttons are visible at the bottom of the table.

The 'LIVE VIEW' section shows a camera feed and control options like Speed, Preset, and Go/Set buttons.

The 'DEVICE INFO' section displays details for the camera: Manufacturer (AXIS), Model (AXIS M3027), IPV4 Address (172.18.2.136), IPV6 Address, MAC Address (00:40:8C:FF:FD:98), Serial Number (00408CFFFD98), and Firmware (6.50.3.1). A 'Camera's Web Page' button is also present.

In certain cases, the media profile information might not be available immediately after adding the camera to the Recording Server. If not entered manually during the Adding a Camera process, the Recording Server uses default credentials to retrieve profile information during discovery, which may not work for all cameras. Once the correct credentials have been entered and saved, the Recording Server queries the camera for the profile details. It may be necessary to click Refresh to populate the list of media profiles.

## Selecting ONVIF Media Profiles

To select a media profile, check the checkbox for the desired profile and save the configuration. Depending on the profile selected, the values are updated in the top camera grid row and Video Compression pane. The example below (using profile\_2 jpeg) shows the change in compression and resolution from the example above (profile\_0 h264).

The screenshot displays the ONVIF configuration interface. At the top, a table shows camera details: ENABLE (checked), ID (28), CAMERA NAME (127-00408CFFFD98), TYPE (Network), DEVICE (172.18.2.136), DRIVER (Generic ONVIF), CHANNEL (1), USER NAME (root), PASSWORD (\*\*\*\*), RESOLUTION (1920x1440), COMPRESSION (MJPEG), FPS (12), SCHEDULE (Std Weekly Sched), and STATUS. Below this, the 'MEDIA PROPERTIES' section is visible, with 'Video Compression' set to MJPEG. A table below shows a list of profiles:

C.	MEDIA PR...	COMPRESSION	RESOLUTION	FPS	GOV	BITRATE (KBPS)	QUALITY	ENCODING PRO...	SELECT
1	profile_3_h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_4_h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_5_h264	H264		12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_6_h264	H264		12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_7_h264	H264	1920x1440	12	32	2147483647	70	Main	<input type="checkbox"/>
1	profile_0_jpeg	MJPEG		12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_1_jpeg	MJPEG		12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_2_jpeg	MJPEG	1920x1440	12	0	2147483647	70	Baseline	<input checked="" type="checkbox"/>
1	profile_3_jpeg	MJPEG		12	0	2147483647	70	Baseline	<input type="checkbox"/>
1	profile_4_jpeg	MJPEG	1920x1440	12	0	2147483647	70	Baseline	<input type="checkbox"/>

If the camera supports multiple channels, changing the channel ID from the top camera grid row will update the profile selection and vice-versa. For a single channel camera with multiple profiles, the channel ID column will remain the same. **Note:** It is recommended to change and apply only one profile at a time.

## Modifying Existing ONVIF Profiles

Some media profile settings may be changed and saved to the camera, depending on make and model. Change the desired settings for one or more profiles and click the Save Profile button. If the operation was unsuccessful, an "Invalid Profile Data" error will be reported and the changes will not be applied. For more information, consult Desktop Client and Recording Server diagnostic logs.

## Configuring ONVIF Events

Configuration of ONVIF events is nearly identical to named driver events. See [Recording Servers Camera Events](#) in the main guide for more information. Note that port 7775 needs to be open in Windows Firewall to allow ONVIF based event handling.

## ONVIF PTZ

An ONVIF PTZ driver has been added to the IP PTZ driver list. This can be set for any network camera, regardless of the camera driver selected. Select the Show All PTZ Drivers to view the driver. The driver supports pan, tilt, zoom, presets, focus near/far, auto focus and auto iris operations.
