

Job Aid 2-B

Using QuickTrack

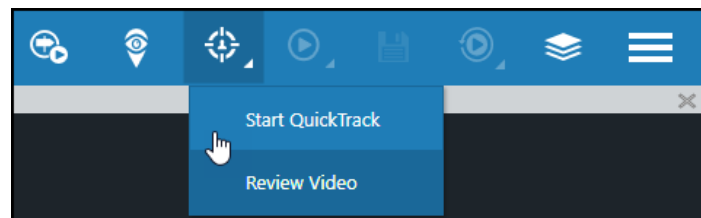

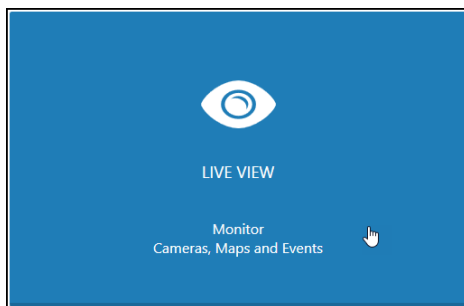

QuickTrack allows the Live View user to initiate a virtual record function and select different cameras to record multiple segments of video from different cameras that are stitched together seamlessly. The QuickTrack process results in a single captured video clip of an entire multiple camera incident.

Note: QuickTrack must be initiated by a user while using Live View only; it does not function on recorded video during playback.

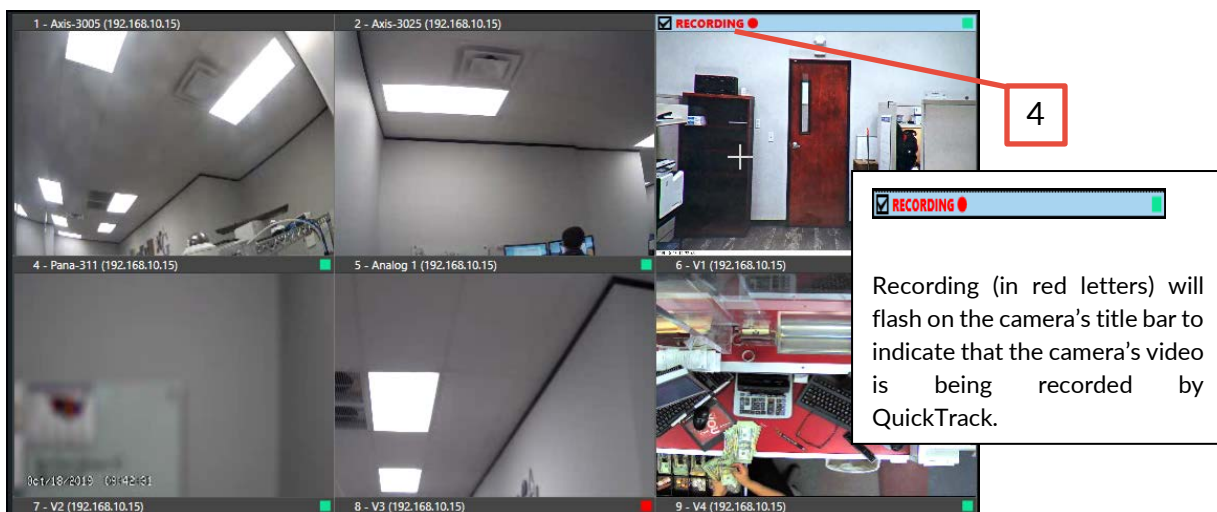

Using QuickTrack

Steps:

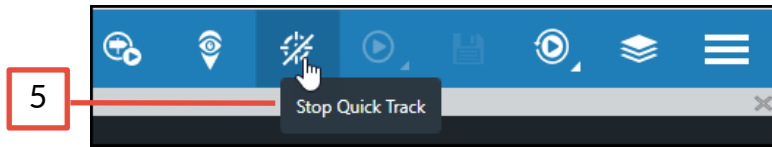

1. Click on the Live View module
2. On the right side of the Main Title Bar, locate and click on the QuickTrack Icon.
3. Select Start QuickTrack

4. In the Live View panel, click on individual cameras to initiate QuickTrack recording of the selected video feed

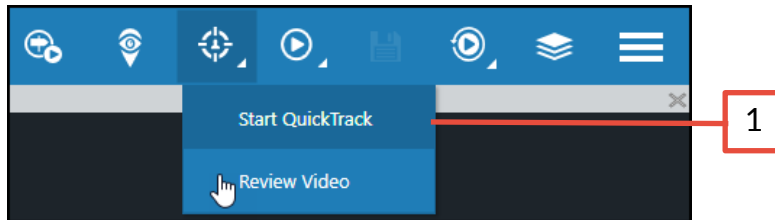

- Click on the QuickTrack icon again to stop the QuickTrack recording process

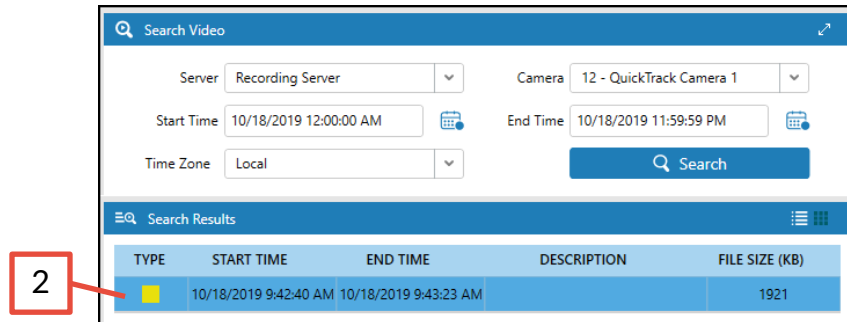

Reviewing QuickTrack Video

Steps:

- In Live View, click on the QuickTrack icon and select Review Video

- Once on the Playback screen, the QuickTrack video segment will be displayed with a yellow square on the left

- On the Video Playback window, you may review your video and have options to:
 - Save a Snapshot
 - Trim and export the video clip to the Export Queue
